PROFESSIONAL SUMMARY

Dedicated Software Engineer and Gameplay Programmer specializing in architecture, tools development, and core gameplay mechanics. Proven ability to build complex, scalable game systems from scratch—including node-based editor tools, inventory architectures, and data-driven enemy AI. Passionate about understanding low-level engine architecture and optimizing player experiences.

CORE SKILLS & TECHNOLOGIES

- Game Engines: Unity, Godot, MonoGame
- Languages: C#, GDScript, UXML, USS, HTML, CSS
- Specialized Skills: Gameplay Programming, UI/UX, Tool development, Engine Architecture, Optimization
- Tools & Software: Git, Blender, Visual Studio, VS Code

FEATURED PROJECTS

Unity Top-Down Prototype | Solo developer | Unity, C# | 5/10/2026

- **Architected** an event-driven dialogue sequence system featuring a custom, node-based Unity Editor tool to streamline narrative workflows.
- **Engineered** decoupled Quest and Inventory systems that dynamically communicate to trigger quest progression based on real-time inventory updates.

[Link to project](#)

Space Pilot – Solo developer | Godot, GDScript | Work in progress

- **Designed** and implemented extensible enemy AI, obstacle spawning, and boss behaviors using modular, data-driven architecture.

[Link to project](#)

MonoGame Arena Shooter prototype | Solo developer | MonoGame, C# | 4/3/2026

- **Programmed** a complete game framework from scratch to deepen understanding of low-level engine architecture, game loops, and rendering pipelines.
- **Implemented** core physics, collision detection, and input handling mechanics without the aid of a commercial engine wrapper.

EDUCATION & CERTIFICATIONS

B.S. in Computer Systems Engineering

Instituto Tecnológico de Piedras Negras, 2021

A rigorous engineering program focused on a full stack software architecture, hardware-software integration, and system optimization.

Core focus

Software engineering methodologies, full-stack software architecture, and system optimization.

Key Capstone

Designed and built a *Super Mario Maker* style level-editor prototype alongside a web platform for sharing custom user creations.

Technical High School Degree in Programming

Centro de Bachillerato Tecnológico Industrial y de Servicios No.34, 2016

Early specialized education that provided a three-year head start in core informatics principles

Core focus

Object-Oriented Programming (OOP), database management, and networking principles.

Key Capstone

Developed a custom Android calculator application featuring integrated audio playback systems.
